## ABOUT ME

Front-end web development calls to all my passions; it incorporates creativity and problem solving and I'm allowed to break it to improve the code (in a separate Git branch, of course)

I love applying responsive design principles and watching my web pages shrink into mobile screens and still looking amazing. It's oddly satisfying. I think in a way I'm kind of like those web pages; I'm moldable, but I still keep my creative intuition intact.

My specialities include quick learning new skills and programming languages, problem-solving, responsive design principles, website optimization, pair programming and Agile methodology. So far I have HTML5, CSS3, Flexbox, CSS Grid, JavaScript, ReactJS, NodeJS, ExpressJS, MongoDB and Git/GitHub under my belt. I've started to play with deployment on Heroku, Now/Zeit and training on TypeScript and Python. I'm still keen to grab onto any other programming language, framework/library, or principles/methods I can integrate into the coding web in my head.
